

Exceed® is a software product that represents an X-Window server that remotely displays the interface of third-party X-Window applications and enables the user to interact with those applications. While every effort has been made to ensure that Exceed user interface elements are Section 508 compliant, we cannot be responsible for the compliance with the stipulations of Section 508 for any third-party application or X-Window protocol.

Product Name: Exceed®

Version: 2008, 2007, 2006 and 10

Section 508 Standards Subpart B — § 1194.21 Software Applications and Operating Systems	Exceed®
a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	Exceed provides keyboard equivalents for all actions.
b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	Exceed does not interfere with the native accessibility features of the operating system.
c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that assistive technology can track focus and focus changes.	Exceed provides a visual focus indicator through the standard functions built into the operating system. (Except for the host-controlled cursor in any host-controlled client area)
d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to assistive technology. When an image represents a program element, the information conveyed by the image must also be available in text.	Exceed provides information about all user interface objects.
e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	Exceed uses consistent images to identify controls.
f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	Exceed provides text through standard system function calls or through an application programming interface which supports interaction with assistive technology.
g) Applications shall not override user selected contrast and color selections and other individual display attributes.	Exceed user interface inherits system settings for font, size and color. It supports system settings for high contrast for all user interface controls. (Except for the client area which is controlled by a remote host)
h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.	Exceed does not use animation in the user interface. (Except when the host application requires it)
i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	Exceed uses color as an enhancement, not as the only way to convey information or indicate an action.
j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	Exceed provides a variety of color selections capable of producing a range of contrast levels.
k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.	Exceed does not use blinking text, objects or other elements. (Except when the host application requires it)
l) When electronic forms are used, the form shall allow people using assistive technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Not applicable. Exceed does not use forms.
