

NFS Maestro™ family of products provides Network File System (NFS) connectivity solutions that satisfy any resource sharing requirements that arise in heterogeneous computing environments. While every effort has been made to ensure that NFS Maestro user interface elements are 508 compliant, we cannot be responsible for the compliance of any third-party applications with the stipulations of Section 508.

**Product Name:** NFS Maestro™

**Version:** 2008, 2007, 2006 and 10

Section 508 Standards Subpart B — § 1194.21 Software Applications and Operating Systems	Hummingbird NFS Maestro™ products
a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	NFS Maestro provides keyboard equivalents for all actions.
b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	NFS Maestro does not interfere with the native accessibility features of the operating system.
c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that assistive technology can track focus and focus changes.	NFS Maestro provides visual focus indicators through the standard functions built into the operating system.
d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to assistive technology. When an image represents a program element, the information conveyed by the image must also be available in text.	NFS Maestro provides information about all user interface objects.
e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	NFS Maestro uses consistent images to identify controls.
f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	NFS Maestro provides text through standard system function calls or through an application programming interface which supports interaction with assistive technology.
g) Applications shall not override user selected contrast and color selections and other individual display attributes.	NFS Maestro user interface inherits system settings for font, size and color. It supports system settings for high contrast for all user interface controls.
h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.	NFS Maestro does not use animation in the user interface.
i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	NFS Maestro user interface inherit system settings for font, size and color. It supports system settings for high contrast for all user interface controls.
j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	NFS Maestro user interface inherit system settings for font, size and color. It supports system settings for high contrast for all user interface controls.
k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.	NFS Maestro does not use blinking text, object or other elements.
l) When electronic forms are used, the form shall allow people using assistive technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Not applicable. NFS Maestro does not use forms.
