The Business Challenge

To be successful in today's competitive economic environment organizations must be able to minimize the time it takes to leverage enterprise information assets in order to streamline business-critical processes.

Yet many organizations do not have the means to access collective information quickly and effectively. According to Gartner, Inc., employees spend between 30 and 40 percent of their time creating, searching for, retrieving, repurposing and organizing documents — time wasted. In document intensive industries, this seriously impacts the decision-making process, hindering organizational agility and limiting competitive advantage.

To help speed time-to-decision, ensure document currency, and simplify access to business-critical knowledge on an enterprise basis, organizations need a system that enables them to effectively and securely manage, organize and share documents.

Document management solutions allow organizations to reduce the time and complexity associated with storing, organizing, and locating information and to leverage an enhanced ability to generate competitive advantage from the organization's cumulative knowledge, while at the same time ensuring the security and integrity of that information. Effective solutions do so by seamlessly blending document management tools with familiar content authoring and productivity tools without requiring users to learn new ways of working. The result is increased business agility and a more productive workforce that securely manages and leverages content in context.
